

DIVYANSH MISHRA

React Native / Frontend Developer

Kanpur Nagar, Uttar Pradesh, India | +91-7080715106 | divyanshmishra.d19@gmail.com
[linkedin.com/in/divyansh-mishra-064a5a3a9](https://www.linkedin.com/in/divyansh-mishra-064a5a3a9) | github.com/Divynashd19 | divyanshmishraresume.netlify.app

PROFESSIONAL SUMMARY

React Native developer with hands-on experience building cross-platform Android applications using JavaScript, REST APIs, and Node.js. Comfortable owning UI features end-to-end — wireframe to production screen — and integrating them with backend services. Also build full-stack MERN applications, most recently an appointment-booking platform with real-time conflict detection and automated notifications.

TECHNICAL SKILLS

- **Mobile:** React Native, Component Lifecycle, Navigation, Mobile UI/UX Implementation
- **Frontend:** React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Web Design
- **Backend & APIs:** Node.js, Express.js, MongoDB, Mongoose, RESTful APIs, JWT Authentication
- **Tools & Workflow:** Git, GitHub, VS Code, Postman, n8n (workflow automation), Agile
- **Core Concepts:** OOP, Component-Based Architecture, State Management, Async Programming, Performance Optimization

PROFESSIONAL EXPERIENCE

Frontend Developer (React Native) | Ovikaliving

April 2026 – Present

- Build and maintain [describe app domain, e.g. property/rental listing] mobile screens in React Native, covering [X] screens shipped to production.
- Translate UI/UX wireframes into responsive mobile layouts, working directly with designers to resolve edge cases across screen sizes.
- Reduce unnecessary component re-renders on key screens, improving perceived load time on mid-range Android devices.
- Debug and resolve UI rendering/layout inconsistencies reported in QA, cutting down recurring visual bugs.
- Use Git/GitHub for version control and participate in code review across a small team.

RELEVANT PROJECTS

Medoso – Appointment Booking Platform (MERN Stack) [GitHub](#)

Tech Stack: React, Node.js, Express, MongoDB, Mongoose, JWT, n8n

- Built a full-stack appointment booking app with JWT-based authentication and role-based access for users and providers.
- Designed a MongoDB compound index to detect and block double-bookings at the database level, preventing race-condition conflicts.
- Decoupled notification logic from the core backend by integrating n8n: the Express API triggers a webhook that handles email/SMS delivery independently.
- Built the React frontend (Login, Register, Dashboard) wired to the API via Axios, with a Node/Express + concurrently dev setup for local development.

[Project Name] – React Native Mobile Application

Tech Stack: React Native, JavaScript, REST APIs

- [Describe what the app does and for whom — e.g. “food ordering app for local restaurants”]
- Integrated REST APIs for asynchronous client-server data sync (login, data fetch, form submission).
- Implemented app navigation and shared state across screens using [React Navigation / Context API / Redux — specify].

[Project Name] – Data Analysis Script

Tech Stack: Python, Pandas (or actual libraries used)

- Automated a data preprocessing workflow that previously required manual handling, covering [dataset size/type].
- Generated [type of insight/report] used for [purpose — e.g. internal review, validation].

EDUCATION

Bachelor of Technology (B.Tech.) in Computer Science & Engineering

Maharana Pratap Engineering College, Kanpur (AKTU) — Expected Graduation: July 2027

CERTIFICATIONS

- Deloitte Technology Job Simulation — applied structured problem-solving to real-world corporate tech scenarios.
- Tata Application Development Job Simulation — hands-on with application workflow optimization.
- IBM Programming Certification — software development lifecycle, secure coding, and data handling.
